

Lab 08 working copy

Use this self-contained FastAPI/SQLite/HTML-CSS-JavaScript project while completing Test and Debug the API.

Focus: Build a pytest regression suite, reproduce a seeded defect and verify the fix.

Acceptance criterion: The seeded test fails before the fix; the full suite passes after it; the regression assertion remains.

The database is created locally when the service starts. Do not submit northstar.db, .env, virtual environments, caches, or live credentials.
