

Lab 11 working copy

Use this self-contained FastAPI/SQLite/HTML-CSS-JavaScript project while completing Connect the Commerce Web App.

Focus: Use fetch to power a responsive dashboard for products, customers and orders through FastAPI.

Acceptance criterion: The browser reads/writes only through FastAPI, SQLite state changes correctly and the UI remains usable at 375px and desktop widths.

The database is created locally when the service starts. Do not submit northstar.db, .env, virtual environments, caches, or live credentials.
